

# *Airy city*

**I.C. "Giulio Cesare" -  
Savignano sul Rubicone  
Scuola Secondaria I Grado  
Classe II G**

*City map*

# *Cars and Motorcycles*

## *Motorcycle:*

These types of motorcycles run on wind energy.

They change direction according to that of the wind.

For example: when the wind goes to the right, the bike also turns in that direction using advanced technologies.

# *Cars and motorcycles*

## *Car:*

These vehicles on the outside are made entirely from solar panels so that they can take advantage of the sun's energy.

They can fly thanks to a lever inserted in place of the handbrake.

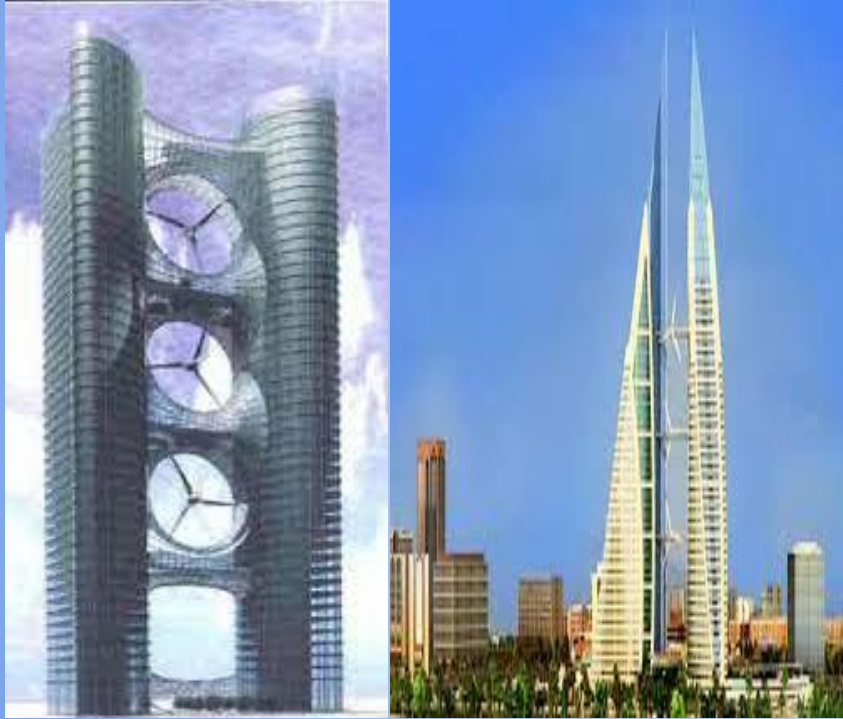

# Car parks

These car parks have carbon dioxide refills which are continuously reused to produce no more.

When the spaces above the cars are finished, a layer is created where it is possible to park.

# *The buildings*

They are built with recyclable material.

On the roofs there are solar panels to attract solar energy.

They also increase the warm air in winter and the wind turbines that are used for the operation of the current.

*Thanks for watching and for your attention*
